Volunteer Guide

How to Use the Drive Performance Index

EDPI

A step-by-step guide to planning, recording and scoring your drive.

Designed and developed by	**Vivaan Agarwal**
Organisation	ElevateX
Written for	ElevateX volunteers and drive organisers
Date	14th November 2025

The Drive Performance Index, including its idea, formulas, structure and written explanation, was designed and developed by **Vivaan Agarwal** for ElevateX. It is the official property of ElevateX and may not be copied or changed without permission.

1 Start here

EDPI is the score we give every ElevateX drive. It tells us how well the drive used its money, its volunteers and its time to make a real difference. This guide shows you exactly what to do, from planning the drive to reading the final number.

You don't need to be good at maths. The calculator on the ElevateX website works out the score for you. This guide shows you how to plan the drive, what to record along the way, and how to read the result.

What goes into the score

- **Money (25%):** Did we spend wisely, and did we stay inside the fund?
- **Volunteers (25%):** Did enough people turn up, and was the work shared fairly?
- **Impact (50%):** Did we achieve what we set out to do?
- **Partner bonus (up to 10 points):** Did we work with an outside partner?

A drive that does exactly what it planned scores **100**. The highest possible score is **115**.

The big idea: the plan comes first

Every part of the score compares what *actually happened* with what you *planned*. That is why the plan matters so much. It is written down before the drive, and it cannot be changed once the drive begins.

2 The five steps at a glance

When	Step	What you do
Before	1. Plan	Fill in the planning sheet (Section 3).
Before	2. Lock	Hand in the plan. After this, nobody edits it.
During	3. Record	Keep receipts, a sign-in sheet, and counts of people and impact (Section 4).
After	4. Enter	Write down the five results (Section 5).
After	5. Score	Enter your results in the calculator (Section 6).

Table 1: The five steps.

3 Before the drive: make the plan

Fill in these six values before the drive starts. They are the targets your drive will be judged against, so be honest and realistic.

Name	What to write	Your value
PlannedVolunteers	How many volunteers you expect to take part	_____
PlannedHours	Average hours you expect each volunteer to give	_____
ImpactTarget	The impact you are aiming for, in one countable unit (meals, kg, books, trees)	_____
Budget	Money set aside for this drive, in rupees	_____
NormalCost	Usual cost per beneficiary. **This is already set at Rs. 53.42.**	Rs. 53.42
HasPartner	Write 1 if you have at least one outside partner, otherwise 0	_____

Table 2: Planning sheet. Fill this in before the drive.

Tips for a fair plan.

- Base PlannedVolunteers and PlannedHours on what you really expect, not on what would look good. Padding your plan does not help, because it only changes what you are compared against.
- Pick one impact unit and stick with it. "500 meals served" works. "Help the community" can't be counted.
- Make sure your Budget is the real amount set aside for this drive, not the whole month's fund.

Lock it. Once the drive starts, do not change any planning value. A plan that is edited after the fact makes the score meaningless, and the result will not be accepted.

4 During the drive: keep records

The score is only as good as the records behind it. Keep these four things.

1. **Receipts for everything you spend.** Add them up at the end to get Spent.
2. **A sign-in sheet with start and finish times for each volunteer.** Work out each volunteer's hours as finish time minus start time. Write them in hours, so 1 hour 30 minutes is 1.5. Each of these becomes one HoursEach entry.
3. **A count of the people you helped.** Count each person once, even if they came back or received more than one thing. This is PeopleHelped.
4. **A count of the impact in your chosen unit.** Meals served, kilograms collected, books given out. This is ImpactDone.

> Ask one person to be in charge of each record, and have them hand it to the organiser straight after the drive. Numbers written down on the day are always more accurate than numbers remembered a week later.

5 After the drive: write down the results

Name	What to write	Your value
Spent	Total money spent, in rupees	_____
PeopleHelped	Number of beneficiaries reached	_____
Volunteers	Number of volunteers who actually took part	_____
HoursEach	One entry per volunteer, in hours (keep these on the sign-in sheet)	see sheet
ImpactDone	Impact achieved, in the same unit as ImpactTarget	_____

Table 3: Results sheet. Fill this in after the drive.

Check your numbers before you score

- The number of HoursEach entries must equal Volunteers.
- Each HoursEach must be between 0.5 and 24 hours. Anything outside this is probably a typing mistake (minutes entered as hours, for example).
- Spent should match your receipts. If it is more than 1.5 times your Budget, the record is flagged for review.
- ImpactDone must use the same unit as ImpactTarget.

6 Working out the score

You do not need to work out the score by hand. The ElevateX EDPI calculator does all of the maths for you. You only type in the numbers from your planning sheet and your results sheet.

ElevateX EDPI Calculator

[Calculator link will be added here]

How to use it

1. Open the calculator using the link above.
2. Enter your six planning values from the planning sheet (Section 3).
3. Enter your five results from the results sheet (Section 5). Enter one hours value for each volunteer.
4. Read your EDPI, together with your money, volunteer and impact scores.
5. Keep a copy of the result for your debrief (Section 8).

> Before you enter anything, run through the checks in Section 5. Most wrong scores come from typing mistakes, not from the drive itself.

7 A worked example

Here is one drive, so you can see how a score comes together. This is the working the calculator does for you.

The drive planned for 40 volunteers working 4 hours each, with a fund of Rs. 60,000 and a target of 1,000 meals. It spent Rs. 50,000, reached 800 people, had 50 volunteers who gave 150 hours in total, served 900 meals and had one outside partner.

Work out	How we got it	Answer
AvgHours	$150 \div 50$	3 hours
CostPerPerson	$50{,}000 \div 800$	Rs. 62.50
BudgetUsed	$50{,}000 \div 60{,}000$	0.833
CostScore	62.50 is more than 53.42, so $5342 \div 62.50$	85.47
BudgetScore	0.833 is below 1.00, so full marks	100
TurnoutScore	$100 \times 50 \div 40 = 125$, which is not above 150	125
TimeScore	3 hours is below the planned 4, so full marks	100
MoneyScore	$\sqrt{85.47 \times 100}$	92.45
VolunteerScore	$2 \times 125 \times 100 \div (125 + 100)$	111.11
ImpactScore	$100 \times 900 \div 1000$	90
PartnerBonus	One partner	10
EDPI	$0.25 \times 92.45 + 0.25 \times 111.11 + 0.50 \times 90 + 10$	**105.89**

Table 4: One drive scored step by step.

8 Reading your score

Your score is a starting point for a conversation, not a grade.

- **100 means you did what you planned.** Above 100 means you beat the plan. Below 100 means something fell short.
- **Look at the three pillar scores first.** MoneyScore, VolunteerScore and ImpactScore show where the drive was strong and where it was weak. The one furthest below 100 is where to focus.
- **Compare with your own earlier drives.** A score going up over time means your planning and delivery are improving.

Questions for the debrief

If this was low	Ask the team
MoneyScore	Did we spend more per person than usual? Did we go over the fund? What cost more than we expected?
VolunteerScore	Did fewer people come than planned? Did a few volunteers carry too many hours? How could we share the work better?
ImpactScore	Was our target realistic? What stopped us from reaching it? What would we change in the plan?

9 Common questions

I spent less than my budget. Why is there no extra credit?

Underspending is not scored on its own. If you did the same work for less money, your cost per person goes down and your cost score goes up. If you did less work, your impact score goes down. Both already show up in the score.

More volunteers came, so our hours per person went down. Is that good?

Yes. More turnout raises your turnout score, and fewer hours each raises your time score. Sharing the work among more people is exactly what the index rewards.

Can I adjust my plan after seeing how the drive went?

No. The plan is locked before the drive starts. Changing it afterwards is the fastest way to make a score meaningless.

A volunteer's hours look odd. What should I do?

Check the sign-in sheet. The most common mistake is writing minutes in the hours column. If the hours are real but unusual, note this for the reviewer.

How do I get my score?

Enter your planning values and results in the EDPI calculator on the ElevateX website (Section 6). It works out every step and gives you the final score.

10 Checklist

Tick each box as you go.

Before the drive

- ☐ Planning sheet fully filled in
- ☐ Impact target is in one countable unit
- ☐ Plan handed in and locked

During the drive

- ☐ Someone is keeping every receipt
- ☐ Sign-in sheet has start and finish times for each volunteer
- ☐ Someone is counting the people helped, each person once
- ☐ Someone is counting the impact in the chosen unit

After the drive

- ☐ Results sheet filled in
- ☐ Number of hour entries equals number of volunteers
- ☐ Every hours entry is between 0.5 and 24
- ☐ Impact is in the same unit as the target
- ☐ Results entered in the EDPI calculator
- ☐ Debrief held, using the pillar scores
